Oscilloscope Probe Kit

The **HanTek** PP-80、PP-150、PP-200 probe is a passive, low-impedance attenuation probe.

The probe has been designed and calibrated for use on instruments having an input impedance of $1\text{M}\Omega$ paralleled by 20pF .

However, it may be recalibrated for use on instruments having an input capacitance of 15 to 40pF .

The probe incorporates a two position (1X, 10X) slide switch in the compensating network and cable length of 1.2 meters.

The specification is as follows.
